Intersections and Unions of Weighted Bergman Spaces

CMFT 5 No.2 (2005), 459–469. [ISSN 1617-9447]

Abstract. Certain intersection and unions with respect to different parameters of the weighted Bergman spaces are shown to be equal. These results are extended to a more general class of function spaces. Some of the results proved here play an important role in the study of complex linear differential equations in the unit disc.

Keywords. Weighted Bergman spaces.
