**The Refined Metric Dimension with Applications**

CMFT 7 No.1 (2007), 77–89. [ISSN 1617-9447]

**Abstract.** We introduce a new metric characteristic of dimensional type for non-rectifiable curves in the complex plane and use it to solve the so-called jump problem, i.e. the boundary value problem for determination of a holomorphic function with a given jump on a given curve.

**Keywords.** Jump problem, non-rectifiable curve, metric dimension.

**2000 MSC.** 30E25.

**Received.** October 22, 2005, in revised form December 3, 2005, and July 7, 2006.
