**Permutable Entire Functions
Satisfying Algebraic Differential Equations**

CMFT 8 No.1 (2008), 101–106. [ISSN 1617-9447]

Abstract. We show that if f and g are transcendental entire functions such that $f(g) = g(f)$, then f satisfies an algebraic differential equation if and only if g does.

Keywords. Permutable, commuting, iteration, factorization, differential equation.
