**An Extension of Jenkin's Condition
for Extremal Domains
Associated with the Univalent Bloch-Landau Constant**

CMFT 8 No.1 (2008), 159–165. [ISSN 1617-9447]

Abstract. The univalent Bloch-Landau constant \mathcal{U} is the largest number such the image of the unit disk under any conformal map f must contain some disk of radius $\mathcal{U}|f'(0)|$. We extend a condition, due to Jenkins, that extremal domains must meet. This condition is stated in terms of harmonic measure.

Keywords. Bloch constant, harmonic measure, symmetry.
