**Dynamics of Structurally Finite Entire Functions  
with Two Singular Values**

CMFT 9 No.1 (2009), 185–198. [ISSN 1617-9447]

**Abstract.** In this article, we treat structurally finite entire functions with two singular values. The dynamics are described in terms of the orbits of these singular values. Hyperbolic components as defined by Milnor in the parameter spaces are considered. In particular, functions of capture type are investigated. We also give concrete examples of such functions.

**Keywords.** Complex dynamics, structurally finite entire function, transcendental entire function, singular value.
