

Contents

Preface.....	vii
Acknowledgements.....	ix
Chapter 1. Introduction.....	1
PART 1. DISCRETE MODELS	
Chapter 2. Inference with Functional Models	
2.1 Introduction.....	9
2.2 Functional Models.....	10
2.3 Assumption-Based Reasoning with Functional Models	12
Chapter 3. Hints	
3.1 Hints and Support Functions.....	19
3.2 Combining Information.....	23
3.3 Bayesian Inference	29
3.4 Invertible Models.....	31
3.5 Focussing	35
Chapter 4. An Algebra of Hints	37
Chapter 5. Making Decisions	
5.1 Selecting Hypotheses.....	43
5.2 Comparison with Neyman-Pearson Test Theory	49
Chapter 6. Summary.....	53
PART 2: CONTINUOUS MODELS	
Chapter 7. Assumption-Based Inference in Continuous Models	
7.1 Introduction	57
7.2 Simple Models	58
7.3 Partitionable Models.....	62
Chapter 8. Applications	
8.1 Linear Models.....	69
8.2 Structural Models.....	72
Chapter 9. Complements and Extensions	
9.1 Reduced and Sufficient Models	79
9.2 Combining Information.....	81
9.3 Transformation of Parameters.....	85

Chapter 10. Fiducial and Confidence Intervals.....	89
Chapter 11. Summary.....	95
PART 3: LINEAR MODELS	
Chapter 12. Introductory Example	
12.1 Prediction in a Linear Model.....	99
12.2 Inference in a Linear Model.....	101
12.3 Intervention and Counterfactuals.....	103
Chapter 13. Linear Systems	
13.1 Linear Systems with Disturbances.....	107
13.2 Likelihood.....	111
Chapter 14. Linear Gaussian Systems	
14.1 Gaussian Distributions.....	113
14.2 Inference in Gaussian Systems.....	114
14.3 Gaussian Potentials.....	121
Chapter 15. Linear Systems and Gaussian Hints	
15.1 The Principle of the Inference.....	127
15.2 Gaussian Hints.....	128
15.3 Underdetermined Systems.....	130
15.4 Determined and Overdetermined Systems.....	134
Chapter 16. Algebra of Gaussian Hints	
16.1 Gaussian Hints and Potentials.....	137
16.2 Marginalization.....	140
16.3 Combination.....	144
16.4 Valuation Algebra of Gaussian Hints.....	149
16.5 Kalman Filter.....	157
Chapter 17: Summary.....	165
Bibliography.....	167
Index.....	169
